About Green Fin

Green Fin Technologies is a comprehensive software services company, providing a broad range of consulting and development services, with headquarters located in UK. Green Fin Technologies philosophy is to address the needs of the customers with the best of Technology available backed by local expertise.

Green Fin Technologies has grown rapidly in stature and expertise. The vision of Green Fin Technologies is aptly encapsulated in its mission. The company's top management is technocrats, dynamic entrepreneurs and expert professionals, who provide the competitive edge to the organization.

Excellent team work is the hallmark of the work ethos that exists in *Green Fin Technologies*. "*An organization where new and expansive patterns of thinking are nurtured, where collective aspiration is set free and where people are continually learning how to learn together*" is a core value persuading the human resources spirit.

In an age of countless customized software providers, *Green Fin Technologies* is defying convention and blazing a new path. The company was born out of the need for a domestic/offshore outsourcing model done right. Our sole purpose is to help you identify your business challenges and then to develop solutions that solve them in the most cost effective and efficient manner. We accomplish this through a proven development methodology that continues to be refined with every engagement. State-of-the-art technology centers provide you 24x7 support and service and the cost advantages of offshore development, as well as the quality and security of domestic project management in the Pakistan.

With a strong commitment to process control, *Green Fin Technologies* consistently delivers exceptional quality.

Why Green Fin Technologies?

Expertise

All of our team members have several years of expertise developing customized, fully integrated systems in a variety of industrial standards. Some of our team members have worked on software projects for industry leading firms as well. In addition, Green Fin Technologies has a well-managed administrative support staff to assist in meeting your needs.

Technically Advanced

Our software development tools and products implement Object-Oriented design and programming. Further, we use the most modern development tools and technologies available on the market today. We are staying on pace with the fast evolving software development capabilities and uses of multimedia and the Internet.

Availability

The Internet allows us to communicate with your team as easily as if we were in the next room. All of our project managers you will potentially interact with have strong English language skills thus eliminating language barriers. Also, because of our location in Pakistan, we can receive our feedback in the morning and address your concerns before you arrive at work the following day.

Flexibility

We are custom-build to client specific requirements. We have proven to be able to react quickly and to adjust to any changes or additions thrown at us during the course of a project.

Speed

Because of our experience, the tools we have evolved, and our talented programmers (among other reasons) we can develop quality, customized systems very quickly.

Dedication

Our programmers are professionals in the truest sense of the word. When we have your deadlines to meet we ensure the deadline is met. When you have a last minute change in specifications, we don't turn the lights off at five and go home. Our people put in whatever work is required, whenever needed, to keep our clients happy.

Reasonable cost

Pakistan has very low operating costs and low-cost labor. Therefore, we can pass on significant savings to you. Ultimately, you'll get more for your software budget.

Expandability

For our clients' proprietary software development projects, we tap a virtually unlimited supply of highly skilled programmers, mathematicians and scientists.

Security

Green Fin Technologies is a UK Base Software Development Company. Our legal, banking and accounting relationships are spread all over Pakistan, UAE and UK. You have the convenience and security of dealing with an Pakistani business with the added benefit of a much lower development cost.

Our Commitment to Business Continuity

Green Fin Technologies has a robust and time-tested Business Continuity Plan (BCP) that ensures that the business operations of Green Fin Technologies are not disrupted by any natural or unnatural disaster.

The BCP reiterates our commitment to delivering the highest quality solutions using the onsite/offshore model, and protecting our clients from risk. Our business continuity plans are based on the need to protect professional staff, computing infrastructure, and intellectual property in order to help our customers remain in business through any contingency. That includes provisions to ensure the mobility of professional skills along with fully redundant communications backbones and computing infrastructures.

Methodology

At Green Fin Technologies, a standardized software development methodology helps us to provide very cost-effective and efficient business solutions. The following would give a better understanding of the same:

PHASE 1- REQUIREMENTS GATHERING

Our Business Consultants conducts Joint Application Development sessions with the client. These are brainstorming sessions that help determine the business objectives and marketing goals. Prototype storyboards or screen layouts are used for role-playing.

PHASE 2 -TECHNICAL ARCHITECTURE

Our Technical Architects advise the client on options available to him with respect to architectural approaches and technology solutions for project implementation.

PHASE 3 - CONFIRMATION

Based on the architecture and technology chosen, the development team of Programmers, graphic designers and project managers draft a development plan for the project with cost and time estimates.

PHASE 4 - INCREMENTAL DEVELOPMENT

This is the stage where the project is actually off the ground. Green Fin Technologies builds the application in progressive phases or increments. Incremental delivery permits experimentation of complex solutions during the course of development. This approach facilitates modifications through hands-on exposure to the delivered increment.
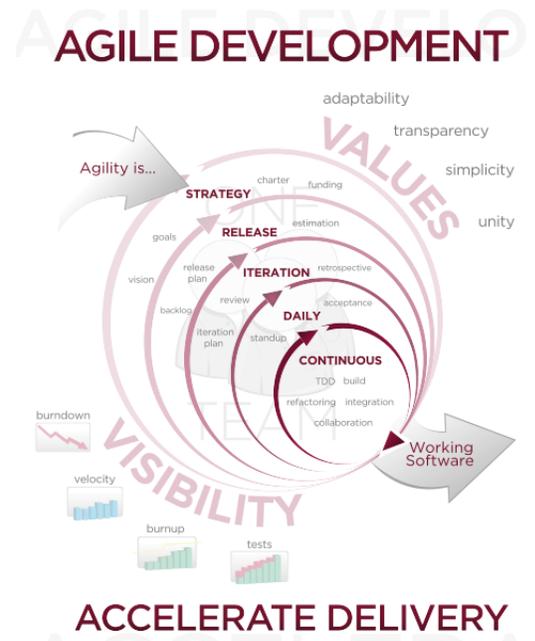

PHASE 5 - INSTALLATION and TRAINING

Once the system is installed on the production servers, comprehensive training is extended to the client's IT/ MIS personnel; not only to administer and maintain it, but also to understand the underlying technology and development tools. The end-users are trained to use the application effectively. Follow-up action in terms of close monitoring of the system and applications ensures immediate response to issues

Some Additional Notes

- Communication is of high profile for a successful development that is why we usually have two project managers assigned to the project. One of them, either a member of our team or your representative, is a local Project Manager who closely works with your team to ensure seamless information exchange and monitors the progress. The other one, the offshore Project Manager, is fully assigned to your project and is fully responsible for it.
- The Internet will undoubtedly be used for effective communication and on-time deliveries. We also use special techniques and tools to support remote development. Our programmers and other specialists effectively work as a team despite the fact that they are in different geographic locations.
- If it is necessary, qualified technical consultant can be assigned to study your business process and your existing software.
  Of course, we understand all the complexity of the development process, great variety of possible situations and requirements, individual sense of taste and other things. We will take whatever time is necessary to meet your expectations.

This development process allows us to guarantee:

- On-time completion of the project.
- Delivery of a high-quality system meeting your business requirements.
- Development of a flexible, easy to use and modify (in case you need some enhancements in future) system.

Services

Green Fin Technologies primary goal is to provide the 360 degree Business Solutions focused on IT services to its clients. We start from business opportunity analysis, preparing feasibility **(Consultancy)**, defining, sketching and design company name, logo, letter head etc (corporate identify in **Media/Creative Services**), domain name registration and hosting (**Network Solutions**), Web Site Development (**Web Engineering**) and/or Software Application Development (**Software Engineering**) and/or providing dedicated resources (**IT Staffing/Branded Services**), developing application for mobile devices (**Mobile Apps**), Online marketing, Sales, Optimization and Lead Generation Services (**Web Marketing**) and providing technical support to ensure system meets day to day requirements (**Support and Maintenance**).

In short, anyone can consult. Ideas are just the beginning of progress. There must be a drive to act on those ideas. Our services start with precision thinking, followed by relentless execution, and we don't stop until the job is done. Have an idea of where you want your business to go?

Green Fin Technologies can offer you the following services:

a. Media/Creative Services

b. Web Engineering

c. Software Engineering/Development

d. Mobile Applications

e. Network Solutions

f. Web Marketing

g. IT Staffing / Branded Services

h. Support and Maintenance

i. Consultancy

j. Skill Development

Media/Creative Services

Committed to provide Corporate Identity; Green Fin creative studio constantly producing high quality graphics, animation and videos enriched with the new ideas part of every project. Some areas where team did extensive project deliveries includes:

1. Corporate Identity
2. Logo Designing
3. Book Cover
4. Flyer/Poster
5. Post Card
6. Google Display Ads

For more please see online portfolio at: *http://www.greenfintech.com/portfolio/portfolio.php*
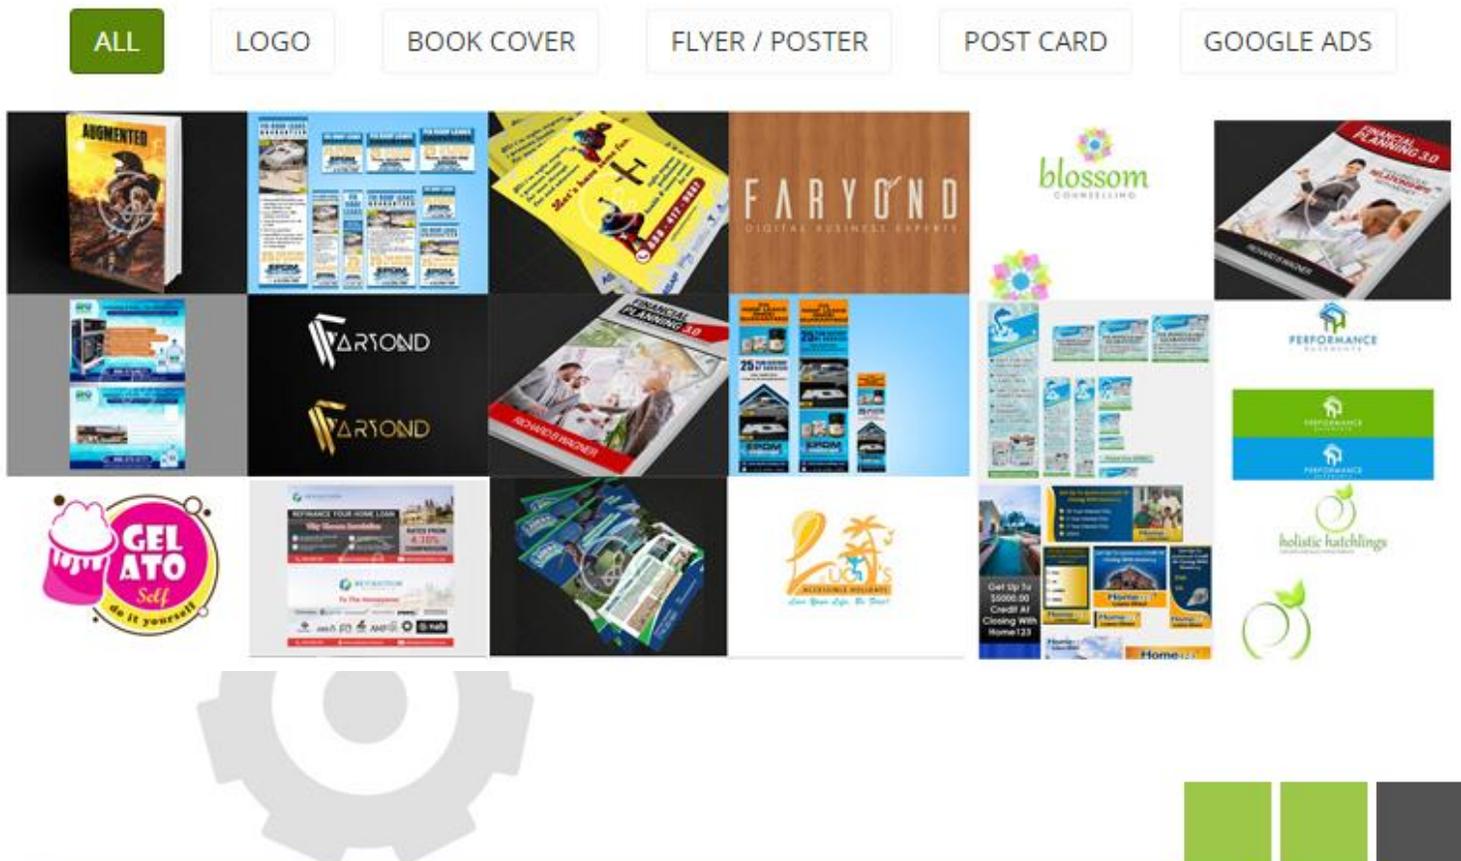

Web Engineering
Web Design & Application Development Portfolio

1.   *Brandivation LLC – US*

Green Fin is a regular vendor of Brandivation in assisting the company providing wide range of services in mortgage industry. Few are here:

- Development of Eleo (Realtime camapiagn performance)
- Designing and maintaining company servers, websites as follows:
    - www.home123.com
    - www.newcenturymortgage.com
    - www.anyloan.com
    - www.123loan.com
    - www.home123partners.com
    - www.mnjtechpartners.com
    - www.brandivation.com

2.   *Blookey – Affiliate and Web Tracking System*

Blookey is an affiliates and web tracking system designed specifically for individuals and small companies that have little or no experience monitoring their online advertising dollars or the dedicated technology in house.

Blookey provides very cost effective tracking tool that is easy to use and requires no internal technology department or hardware costs.

Technologies: PHP/MySql, AJAX, XML

URL: http://www.blookey.com

Country: United States

3. The RvNetwork

TheRVnetwork provides an outlet for Campers and Rv'ers to give suggestions for itineraries, accommodations, dining and things to do. Did you ever have the unfortunate experience of going to a new campground or RV park only to find out the facilities were horrible or it was not child or pet-friendly? What about camping tips or great road recipes? And for the Newbie out there what a great way to get started before you hit the open road! It's all here and more! So what does TheRVnetwork offer?

- Meet new people at a website designed specifically for YOU!
- Free live video chat
- The ability for unlimited photo uploads to share with the community
- Upload videos and share with your friends
- Customize your own Blog
- Send gifts to your friends and post on their billboard!
- take part in our forum discussions
- Get travel advice from fellow RV'ers you can trust
- 50% off classified listings
- And more!

Technologies: PHP/MySQL, Javascript

URL: http://www.thervnetwork.com

Country: United States

4. EPDM Coatings Inc.

Epdmcoatings offers Roof leaks products for Residential, commercial, RV and Campers roof leaking. Company is working since 25 years and has a wide experience in Elastomeric products and its efficacy.

Green Fin Technologies developed online central ordering system, intelligent real time reportings, affiliate management system with very high success rate. Company has thousands of dollars turn over managed through the Green fin developed system for last 2 years.

Technologies: PHP/MySQL, Javascript

URLS: http://www.epdmcoatings.com

http://www.liquid-roof.com

http://www.liquidroof.net

Country: United States

5. Buy Liquid Roof

Buyliquid roof started its operation in year 2007 to widely promote, market and sales of Liquid Roof and Liquid Rubber products for roof repairs.

Green Fin Technologies developed Online central ordering system, intelligent real time reportings, affiliate management system with very high success rate. Company has thousands of dollars turn over managed through the Green fin developed system for last 2 years.

Technologies: PHP/MySQL, Javascript

URL: http://www.buyliquidroof.com

Country: United States

6. KLC Coatings (FixAllRoofs.com)

KLC Coatings started www.fixallroofs.com in year 2008 with the aim to widely promote, market and sales of large variety of roof repair products never launched by any of its sister concerns.

Green Fin Technologies developed Online central ordering system, intelligent real time reportings, affiliate management system with very high success rate. Company has thousands of dollars turn over managed through the Green fin developed system for last 2 years.

Technologies: PHP/MySQL, Javascript

URL : http://www.fixallroofs.com

Country: United States

7. 360 Degree Pix

Complete online network of buyer, seller and brokers to conduct home purchase, sales and bidding services. This system is developed using dedicated server on Microsoft technologies.

Technologies: ASP / SQL SERVER 2005

URL: http://www.360degreepix.com

Country: United States

8. Easy Replication Ltd.

With easyreplication, it's so simple and trouble-free. If your looking for a CD and DVD replication company that offer's reliable service, low costs, quality products and a fast turnaround you have found the best company to contact. We meet and exceed your desired CD Replication, DVD Replication and Bulk CD Replication services in addition to USB Flash Drives and Branded USB Sticks and will bypass your expectations. At easyreplication, we have the goal to give the customer service that will be above par performance. We fully understand the requirements of our clients and offer them the preferred optical media solutions.

Technologies: PHP/MySQL, Javascript
URL: http://www.easyreplication.co.uk
Country: United Kindom (UK)

9. Teenquest Youth Tours

Team of highly professional educators/directors offering Achiever Radio and other material to improve kids characters. Teenquest offers character education programs designed customized to the needs of US education sector.
GreenFin design, developed and marketing the products of Teenquest since 2008 with online ordering, inquiry and payment processing system using paypal.

Technologies: PHP/MySQL, Javascript
URL: http://www.iamgoingtocollege.com
Country: United States

10. GLBN.net (in progress)

The Greater Bridgeport Latino Network (GBLN) was established in December 2003 in response to the growing need for Latino professionals in the greater Bridgeport area to establish a collaborative environment where Latino and other interested professionals could exchange resources and ideas.

Latinos comprise over 35 percent of the greater Bridgeport area population. While a very diverse community, many Latinos face numerous social, educational, and economic challenges. GBLN has come together to help coordinate and form collaborations among Latino and other groups that support positive changes to address some of these challenges and contribute to Bridgeport's growth.

GBLN is a 501c3 non-profit organization with a 12-member Board of Directors. Our mission is to educate the public, private, and nonprofit sectors about the various social and economic issues affecting Latinos and to participate in activities that foster a sense of support and unity among the Latino community.

Technologies: PHP/MySQL, Javascript
URL: http://www.gbln.net
Country: United States

Software Engineering/Development

As a comprehensive service provider of offshore outsourcing in Pakistan, Green Fin Technologies is focused on offering top class custom software development service at reasonable prices.

Green Fin Technologies Offshore Software Product services aim to bring your software products to market faster and more cost effectively than your competition. With Green Fin Technologies as your offshore development partner or your development team, you can realize your product vision.

By providing our customers with the highest-skilled teams and a world-class infrastructure, we can ensure the quality and reliability of the products we build for you.

Windows Application Development Portfolio

1. Universal Check Cashing System - Glotech Inc.

Check cashing system is one of the best product in US for the financials institution. This system uses Check Cashing Scanner, Video Cam. And Social ID Card Scanner to automate the check cashing process. This is multi-user and multi-site large scale system development under the banner of Glotech Inc. Georgia USA.

2. NAEYC (National Association For the Education of Young Children) – Glotech Inc.

The National Association for the Education of Young Children (NAEYC) is the nation's largest and most influential organization of early childhood educators and others dedicated to improving the quality of programs for children from birth through third grade.

GreenFin has developed under the umbrella of Glotech Inc. the Accreditation Management System, Membership Management System, Subscription Management System, Centralized Payment System, and Resource Sales System for NAEYC. In addition to that we have developed Conference Management System that is used by several of NAEYC affiliates.

3. Campagna – Strategic Management System – Glotech Inc.

The Campagna Center is proud to be the leading children's organization in Alexandria, Virginia, caring for more than 1,500 children daily. Since 1945, The Campagna Center has been a beacon of hope and a catalyst for community involvement. Today we operates seven high-quality programs that support children in Alexandria by providing services that allow them to arrive at school ready to learn and ensure they are academically successful at each grade level.

GreenFin has developed the strategic measurement system for Campagna Center under umbrella of Glotech that will help The Campagna Center achieve these two outcomes by measuring and evaluating the continued progress of Campagna Center staff. Through these efforts, they expect to see measurable progress toward meeting their shared goals. We also developed Givings System to collect donations, product sales, membership fees online through Authorize.net payment system.

4. eSmartex (ERP Solutions for Textile Industry)

This system covers most of modules required to successfully run a textile industry. Following modules are part of this system:

a. Procurement System

b. CMMS (Computerize Machinery Mgt. System) AND TPM (Total Productive Mgt.)

c. Sales System

d. Production System

e. Store and Spares

f. Human Resource Mgt. System

g. Financials

h. Budgeting and Planning

i. Spin planner

j. SMS Add-On

5. PANACEA (Software for Pakistan Army Aviation)

This system is specifically developed for Pakistan Army Aviation, and deployed on all bases including Multan Base, Gujrawala Base, Qasim Base, Rwp. And Army Aviation Command, Westrige Rwp.

This system is also extended and implemented successfully in Asia largest Aviation Workshop (503 Pakistan Army Aviation Workshop)

Following are the modules part of this system:

1. Spares Mgt. System (SMS)
2. Aircraft information Mgt. System
3. Mission Mgt. System
4. Personnel Mgt. System
5. Command Integrated Aviation System

Mobile Applications

Do you want Mobile App? Either in Android or iPhone, we are here to help you.

Network Solutions

IT Staffing / Branded Services

A dedicated offshore software development team is the best approach for projects significant in time, or scope, or for other business considerations. Green Fin Technologies can support your needs in a variety of different areas and technical specialties.

A dedicated offshore software development team is the best approach for projects significant in time, or scope, or for other business considerations.

Green Fin Technologies can support your needs in a variety of different areas and technical specialties, including:

- Custom Software Development
- Database Design and Administration
- Network Engineering and Administration
- Project Management
- Software Development and Engineering
- Systems Analysis
- Web Development and Design
- Technical Writing

How we do it:

- According to your request, we will provide the resumes of technicians who possess the relevant technologies and skill sets you require. This process will best meet your pre-defined criteria and can be additionally interviewed by you before launching new projects.
- At the commencement of new strategic partnerships, when the service begins, we can communicate directly by email, instant messenger, or telephone, so that the offshore team members can respond promptly working in conjunction with your team.
- You can control the progress of the offshore team by web-based project management tools. We can submit daily or weekly progress reports tailored to customer needs.

- We allow you to build your offshore facilities one cubicle at a time - you can always add or reduce staff.
- As a turn-key solution we provide facilities, human resources, recruitment, payroll, and inclusive services for all offshore team members.

Consultancy

Green Fin Technologies has the unique advantage of access to a pool of highly qualified and skilled computer professionals who are proficient in English as their working language. These strong language skills are an asset that differentiates Green Fin Technologies from many competitors and the key to success of offshore outsourcing to Pakistan.

Support & Maintenance Services

For a successful system, it needs support and maintenance services to meet day to day requirements. System needs to grow both vertically and horizontally parallel with the business. If you get dedicated services there are always guarantee to get ahead of competition. Yes, Green Fin Technologies provides training, support and consultancies to companies that needs in a variety of different areas and technical specialties. We can handle from server management towards the bug fixing in any language and platform to give you piece of mind.

Skill Development and Consultancy

Green Fin Technologies provides training, support and consultancies to companies that needs in a variety of different areas and technical specialties, including:

- Custom Software Development
- Database Design and Administration
- Network Engineering and Administration
- Project Management
- Software Development and Engineering
- Systems Analysis

- Web Development and Design
- Technical Writing

- Rational ROSE

- Rational Clear Case

- Microsoft Project

- Visual SourceSafe & SourceOffSite

- Rational SQA Suite

- Visual SourceSafe

- SQA suite

- Webload

Frequently Asked Questions (FAQs)

Why is the popularity of offshore software development growing so fast?

There are two main reasons:

- shortage of domestic IT professionals in the USA and Western European countries
- customer's wish to cut development expenses.

Drew Robb's article from "Information Week" magazine explains both mentioned reasons. Click here to view this article.

Why are Pakistani offshore software development companies are popular at the market?

Important reason attracting customers to Pakistani offshore software development market is a relatively low level of programmer's salary and small overheads. It allows to minimize expenses that in many cases is the determinant.

What's the difference between contract programming and outsourcing?

These two terms are often confused, but they are not the same at all. Contracting is when a company (customer) purchases services from another company (supplier). In this situation, the customer "owns" and controls the process. In other words, the customer tells the supplier exactly what it wants and how it wants the supplier to perform those services. The supplier cannot vary from the customer's instructions in any way. The customer can replace the supplier quite easily by canceling the contract.

In outsourcing, the customer turns over the control ("ownership") of the process to the supplier. The customer tells the supplier what results it wants the supplier to achieve, but the supplier decides how to accomplish those results. In outsourcing, the supplier has expertise in a certain process (such as programming or WEB-development, etc.), and it has economies of scale. If the customer were to dictate to the supplier how to do the job (as happens in contracting), the customer would be destroying an important aspect that makes outsourcing work - the value that is created by using the supplier's expertise and economies of scale. Telling the supplier how to do the job also eliminates accountability on the part of the supplier, and this is an important element in successful outsourcing relationships.

Here is an example of software development services that are outsourced and that are contracted.

Contracted: The customer says it wants a program for staff planning. The customer tells the supplier how this program should work, how screen and printed forms should look like, which programming language and development tools should be used, etc.

Outsourced: The customer says it wants to automate the process of staff planning assuming that he needs some software to reach the result. The customer describes his intentions in general way, assigns the limit of expenses that he is ready to spend and provides supplier with all necessary information about planning rules and practice in customer's company. Then the supplier decides how to accomplish the task, how many programs customer really needs, should these programs be implemented as client-server system or no, which programming languages and database systems are the most suitable, etc.

We don't want to say here that one of these two models is better than another. Depending upon the situation, each of these models may be desirable and successful. Green Fin has an experience in both.

Will I be able to monitor and control the development progress?

Absolutely. We can submit development reports, current source code and application demos on a regular basis. We can give you ftp access to all development files to see and control the development process at any time you like. Also we make a working schedule so that a customer may see an application framework, demos and UI at the early stage of the development process. This let you make early corrections to the design, shorten the number of design-development iterations for large and complex projects and considerably save your funds as the result. You can also suggest you own ways to monitor the process to make yourself feel confident.

I am concerned about the delays introduced both by the difference in time zones and in the delays of other project priorities. Would you expect to be able to give us confirmed delivery dates and bids with milestones and checkpoints along the way?

Absolutely but provided that you and we have clear understanding about the application to be developed. After we negotiated and agreed on all the features, functionality and UI, we will be able to make a specification, working schedule with milestones and checkpoints. Also our project managers work overtime often to ensure good dialog and prompt replies to your questions.

I have concerns about Intellectual Property Ownership. Who owns the final product?

Most often our customers hold the copyrights and own the final product. This is fixed in the contract.

May I propose my own conditions?

We are quite flexible and ready to consider your suggestions.

Can you send me some code excerpts to see its style, commenting and code quality?

We have to say that some of our customers don't want us to provide source code or even ask us to delete it after we have completed the development. Thus our best work can not be presented to you. Nevertheless what we can show is also quite impressive. Write to us for receiving source code excerpts. If your company has own programming style, our developers have experience in following different coding styles and meeting different code requirements.

Contact Details:

Green Fin Technologies provided IT solutions, consultancy in all walks of life. We strictly abide by rules and Non-Disclosure agreements signed with clients not to mention the services we have and are providing to them. These covers from financial institutions to Trade businesses spread over multiple countries including USA, UK, UAE among few.
